

Chung

Named after Winston Chung, inventor of the lithium iron phosphate battery, **Chung Hall** is a four-story building focused on the engineering disciplines. With many classrooms, labs, and faculty offices, engineering majors will spend a lot of time here.

For visitors, it's worth checking out the café Bytes, if it's open, which serves as a place to reenergize and relax in either indoor or outdoor seating. Often, you'll also see a vehicle on display courtesy of UCR's automotive engineers!
